14 GREAT LAUNDRY TIPS

A collection of our best laundry tips before and after washing to maintain your garment's fit, extend its lifespan and reduce resource consumption.

General laundry tips

1. Avoid unnecessary washing

Wear your clothes one more time. Avoid unnecessary washing that wears out clothes and thus shortens their lifespan.

2. Air out the clothing

Feel free to air out your clothes instead of washing them, if they are not dirty, then they will last longer.

3. Check the care label in your clothing

The care label indicates how the clothes are best cared for, washed and dried to preserve their quality and lifespan.

4. Fill the washing machine

Fill the washing machine as much as possible and minimise the use of water, electricity and detergent.

Advice before washing

5. Sorting

Wash the clothes with similar colours to avoid bleeding of colours in the washing machine.

6. Turn inside out

Turn clothes inside out. Close zippers and buttons when washing or tumble drying to keep clothes longer.

7. Choose the right detergent

Choose eco-labelled detergent as it is economical in use and beneficial for both the clothing and the environment.

8. Dosage

Dose detergent correctly and according to water hardness. Too much washing powder does not make clothes cleaner, but leaves soap residue in clothes.

9. Avoid the following

Bleach, optical brighteners and fabric softener.

10. Lower washing temperature

Turn down the temperature when washing. The washing instructions in the clothes merely indicate a max. temperature.

After washing

11. Maintain shape

After washing, stretch the clothing into shape before drying it, and it will keep its shape better and shrink less, so you can use the clothes longer.

12. Use the clothesline

It requires less energy consumption and you avoid the clothes shrinking after a round in the dryer.

13. Ironing

Always follow the ironing symbols in the care label located on the inside of your clothing.

14. Clean the washing machine

Clean the washing machine and rubber strips after each wash, remove old soap from the soap drawer and run a hot wash monthly to avoid bad odours.

RECYCLED FIBRES Minimum 20% — Recycled fibre is fibre produced from recycled waste materials. The waste materials are collected, sorted, and broken down to a stage where they can be reused as fibre. The fibres consist of 100% recycled fibres or are blended with new fibres, which are then spun into yarns that are either woven or knitted into new textiles. The reuse of fibres helps to minimise the need to produce new raw materials.
